428		The draft OPSS 741, Table 2, specifies APE Barrier as a Category III Option (Restrained to Asphalt or Concrete). This does not match MTOD 911.581, Note B, which specifies that the System Configuration meets MTO deflection categories I, II, III and IV. MTOD 911.581 also does not specify a restraint option for Concrete surfaces.	APE barrier is a Category IV barrier crash tested on asphalt. Table 2 in OPSS.PROV 741 corrected to reflect this.
