441	N/A	On recent projects, the Provincial Sign Shop has insisted that (at least certain) extruded intermediate signboards be mounted on support structures that are available in the Structural Standard Drawings and has NOT permitted them to be installed on this Intermediate Sign Support structure. It is unclear as to why this is insisted upon. Please clarify or provide additional information as to what extruded intermediate signboards can or cannot be installed on this structure.	The Highway Gator can be used with the standard Alcan extruded aluminum sign board panels specified in Ontario Traffic Manual Book 3. This drawing update provides additional details for attaching the Alcan panels to the Highway Gator sign supports.
