491	Individual	Would there be any benefit to identify the treatment of the waterproofing and protection board installation adjacent to the deck drain, or is the treatment obvious enough from other OPSD's?	The waterproofing detail does not belong to this MTOD. MTO will consider including the detail in other applicable OPSDs.
504	The Ganawa Company Ltd.	As a fabricator, this is doable however, using 316L stainless steel materials for these deck drains will drive the price high (approximately 6 to 8 times higher than the galvanized materials). Plus the price of stainless steel frequently fluctuates (on the high side) compared to mild steel	Thank you for sharing your concern. While the material cost of stainless steel deck drains is significantly higher than that of regular steel, the investment will pay off over the bridge's service life due to the superior durability and long-term performance benefits of stainless steel.
